

Agricultural Attachments

GEM AG

GEM Attachments offers a full line of Wheel Loader Attachments for your Agricultural needs. General Purpose, Light Material, Silage and other style buckets. Various styles of forks including Construction, Utility Pallet and Log and Lumber Forks

RECESSED INCREASE DUMP CLEARANCE BUCKET

- Our Patented Design increases Dump Clearance by 6-18”.
- Our Combination of Roll Back/Roll Out, Spill Plate, Side Plate & Bottom Lip design gives this bucket a Higher Fill Factor & Minimizes Spillage.
- Higher Fill Factor saves fuel with fewer passes to fill the mixer and also extends the warranty on your machine by cutting run time.
- Buckets can be custom built for a wider width allowing the bucket side face to make contact with the silage piles saving damage to the machine fenders, side mirrors, etc.
- The extra width allows for feathering of expensive materials without going over mixture weights. This also allows more machine maneuverability increasing safety and cycle times with less trips in and out of the pile.

ROLL OUT BUCKET

- This bucket offers an increased dump clearance, typically 8” to 14” above the hinge pin height.
- Equipped with cushioned cylinders on open and close cycles. This helps extend bucket life.
- With a wide sub carriage you will have more durability against twisting and flexing.

PUSH OUT BUCKET

- The high dump alternative Push Out Bucket is smooth and metered with controlled discharge. This eliminates waste and spillage.
- Increased production with faster cycle times versus the Roll Out Bucket.
- The smooth push out cycle reduces loader arm wear and with less moving parts helps extend bucket life.
- This bucket has increased dump height capabilities along with shielded cylinders and adjustable inner rubber scrapers.

GE

REMOVABLE GRAPPLE

- The Removable Grapple helps you get more out of your existing bucket.
- The addition of a removable grapple allows machine versatility and the ability to perform in many more applications.
- The 5 Step quick installation and removal allows the operator to quickly change for other operations.
- With the increase of your bucket load and carry capacity for silage feed, mulch, manure, etc.
- The Removable Grapple can also be used for applications such as clearing debris, trees and brush, storm damage or trash.
- Clamps onto awkward loads for securing movement and scrap handling.

CATTLE FEEDER GRAPPLE BUCKET

- The versatile bucket is designed for handling your hard tasks of moving feed, silage, hay bales and manure.
- The grapple arms keep your load secure while allowing you to maximize your load.
- Capacity to carry two round hay bales.
- This bucket is great for cleaning pens and handling manure piles.

SILAGE BUCKET

- Silage Buckets are used on farms for handling livestock feed, silage and snow removal applications.
- This bucket costs less than the standard light material bucket.
- It offers some increase in dump clearance, reduced center of gravity and increased heap.
- Additional roll back stop is an option.

LIGHT MATERIAL BUCKET

- Ideal for handling Fertilizer, Silage and Feed.
- This bucket offers an increased heap capability, reduced spillage and additional roll back.
